

# Women Safety Device

Standalone Protection | Immediate Deterrence | Zero Dependency

---

## **The Reality: Why We Need It**

In emergency situations, every second counts. Traditional reliance on smartphone apps often fails due to network latency, dead batteries, or the inability to unlock a phone under stress.

# Limitations of App-Based Solutions

---

## Network Dependent

Useless in basements, rural areas, or network dead zones where emergencies often occur.

## Slow Activation

Requires unlocking phone, finding app, and navigating UI—taking valuable seconds.

## Battery Drain

Phone batteries die quickly. If your phone is dead, your safety net is gone.

# The Solution

**Standalone. Instant. Powerful.**

A dedicated hardware prototype designed for one purpose: immediate protection. It operates independently of any smartphone, ensuring that safety is always just one button press away.

Compact enough to carry anywhere, powerful enough to deter threats instantly.

# Mechanism of Action

---

# Key Capabilities

---

## Instant Response

Activates in microseconds.

600 × 400

## Grid Independent

No internet or GPS needed.

## Panic Button

Tactile, fail-safe trigger.

# Technical Specifications

---

- **Power Source:** High-capacity Li-Po battery ensuring standby time of up to 6 months.
- **Control Circuit:** Micro-controller regulates voltage to ensure current remains non-lethal but effective.
- **Output Module:** Twin-probe contact points designed to deliver a localized deterrent shock.
- **Safety Lock:** Mechanical safety switch prevents accidental triggering in bags or pockets.

# Critical Use Cases

---

## Night Commutes

Essential for walking from bus stops or metro stations to home after dark.

## Solo Travel

Provides a layer of confidence and security when exploring new cities alone.

## Campus Safety

Ideal for students moving across large campuses late at night.

*"Safety isn't just about protection; it's about the confidence to live freely without fear."*

— Design Philosophy

# Response Time Comparison

*Lower is better. The standalone device offers near-instantaneous reaction.*

# Future Enhancements

---

## IoT Integration

Future versions may include a low-energy Bluetooth module to auto-trigger a phone recording or silent SMS once the main panic button is pressed, creating a hybrid safety net.

## Wearable Form Factor

Miniaturizing the circuit to fit into discreet jewelry, smartwatches, or keychains to make the device even more accessible and less conspicuous.
